## Ping to test server connectivity using sockets

**Installing Python Ping** pip install pythonping in windows python get-pythonping.py [in run command prompt] **Python Ping (pythonping)** is a public repository you can find on **PyPI**. from pythonping import ping ping('8.8.8.8') simply ping Google. you won't see anything in your console if you just run this script. This is because our ping is **silent by default**, and does not print anything to screen.

If we want to see everything on-screen, we can simply use the verbose flag.

```
ping('8.8.8.8', verbose=True)
```

---

## Ping to test server connectivity

### How to ping a website in python

```
from os import system print('1.
Ping Google') print('2. Ping
Yahoo') print('3. Ping custom
URL') while True:
    key = int(input('Input your choice: '))
    if key == 1:
        system("ping www.google.com")
    elif key == 2:
        system("ping www.yahoo.com")
    elif key == 3:
        url = input('Enter URL: ')
        system("ping " + url)    else:
        print("Invalid Option!")
```

output:

---

```
1  from os import system
2  print('1. Ping Google')
3  print('2. Ping Yahoo')
4  print('3. Ping custom URL')
5  while True:
6      key = int(input('Input your choice: '))
7      if key == 1:
8          system("ping www.google.com")
9      elif key == 2:
10         system("ping www.yahoo.com")
11     elif key == 3:
12         url = input('Enter URL: ')
13         system("ping " + url)
14     else:
15         print("Invalid Option!")

**EXP NO:10****DATE:17/10/24****PING TO TEST SERVER CONNECTIVITY USING SOCKETS****AIM:**

To develop ping program to test server connectivity using sockets.

**ALGORITHM:****Server.py**

1. Import the socket package
2. Initialize local IP address and local port. 3.
- Create a socket using socket() function
4. Bind the IP address and port number.
5. Accept client request for connection. 6.

Print the received connection details

7. Send reply message to the client.

8. Close the connection.

### **Client.py**

1. Import the socket package 2. Initialize server IP address and local port.

3. Create a socket using socket() function.

4. Start the timer.

5. Send message to the server.

6. The reply message of the server is received.

7. The timer is stopped.

8. Print the round trip time statistics.

### **Ping to test server connectivity using sockets**

#### **Client code:**

```
from socket import * from os import
system s = socket(AF_INET,
SOCK_STREAM)
s.connect(("127.0.0.1",8000)) # Connect
op='connect'
s.send(op.encode('utf-8')) # Send request
data = s.recv(100).decode()# Get response
print(data) system("ping "+ gethostname())
s.close()
```

```
#Server Code: from socket import * from
os import system s =
socket(AF_INET,SOCK_STREAM)
s.bind(("",8000))
```

---

```
s.listen(5) while True:
    c,a = s.accept()
    print("Received
connection from", a)
    data=c.recv(100).decode()
    print(data)
    c.send(data.encode('utf-
8'))    system("ping "+ a)
```

```
c.close()
```

output:

server:

---

```
C: > Users > Lenovo > Desktop > cn > server.py > ...
1  from socket import *
2  from os import system
3  s = socket(AF_INET,SOCK_STREAM)
4  s.bind(("",8000))
5  s.listen(5)
6  while True:
7      c,a = s.accept()
8      print("Received connection from", a)
9      data=c.recv(100).decode()
10     print(data)
11     c.send(data.encode("utf-8"))
12     system("ping "+ a)
13
14     c.close()
```

```
